

## Protect your most valued data, simply & cost efficiently

Cyber resilience and efficient storage are absolute musts for world class campuses.

Traditional data resilience solutions are no longer adequate to address today's cyber threats. Safeguarded Copy — now available in IBM FlashSystem family — adds a layer of protection with immutable and isolated copies to address today's evolving threats. In the event of an attack, these copies can be quickly restored to recover with confidence.

For the 14th consecutive year, Gartner has positioned IBM as a Leader in the Gartner Magic Quadrant for Primary Storage Arrays.
